Defender for Cloud Apps

The explosion of SaaS applications brings both productivity and security challenges. Managing and protecting sensitive data across these cloud environments is complex and time-consuming. Traditional security often falls short, leaving you vulnerable.

Leveraging Microsoft Defender for Cloud Apps, Pathway delivers a specialized security service tailored to **secure your SaaS environment effectively**. Our approach transcends the capabilities of conventional Cloud Access Security Brokers (CASB), offering a robust, cloud-focused security solution.

What our service can do for your business

Gain Comprehensive Visibility and Control:
Pathway leverages Defender for Cloud Apps to give you complete oversight of all your SaaS apps, identify shadow IT, and enforce usage policies.

Stop Advanced Threats:
We harness the power of Microsoft Defender XDR to detect and respond to sophisticated cyberattacks targeting your SaaS data.

Protect Your Sensitive Information:
Pathway helps identify and safeguard sensitive information stored in cloud applications, preventing unauthorized access and data loss.

Simplify Security Management:
Our experts utilize Defender for Cloud Apps' SSPM features to identify misconfigurations and recommend best practices for each connected app.
