

Entra ID Protection

Compromised identities are a major security concern in today's digital landscape. Pathway offers a comprehensive service leveraging Microsoft Entra ID Protection, a powerful cloud-based solution that helps you **prevent, detect, and remediate identity compromise in real time**. By analysing user and sign-in patterns based on integrated risk scores from various sources, we protect your organization against identity-based attacks, such as password spray, brute force, phishing, infected devices, and leaked credentials.

What our service can do for your business

Prevent Account Takeovers

We leverage integrated risk scores to identify and block unauthorized access attempts in real time, protecting sensitive data and resources from account takeovers

Safeguard against Credential Theft

Pathway implements high-assurance authentication methods to add extra security layers that safeguard against credential theft and unauthorized access attempts.

Gain Deeper Security Insights

Gain valuable intelligence on potential threats and attack patterns for proactive defence.

Automate Threat Detection and Response

We leverage machine learning to automatically identify high-risk users, sign-ins, and potential attacks, enabling a faster and more efficient response to security threats.

Have Dynamic Access Controls

Pathway configures Entra ID Protection to automatically adjust access privileges based on changing risk factors, such as location or device type. This ensures that only authorized users have access to critical resources based on the real-time risk assessment.

Benefits

Proactive Threat Detection

Automated Response

Improved Visibility and Reporting

Easy Integration
